

GUN TOOL PRO™-AR15

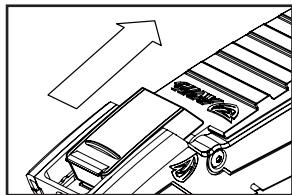

USER GUIDE & WARRANTY

KNIFE BLADE: The raptor claw point blade is designed for utility cutting, such as opening ammunition boxes, cutting rope and even trimming cleaning patches in a pinch. Only re-sharpen the blades with a carbide or ceramic sharpener following the sharpener manufacturer's instructions.

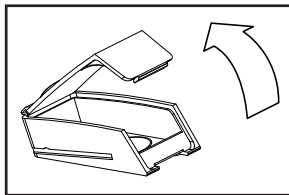

BOLT OVERRIDE TOOL: The bolt override tool can be used to clear jammed cartridges that get stuck between the bolt carrier group and the charging handle. Carefully engage the firearm's safety, remove the magazine, pull the bolt carrier group back using the tool and shake the stuck cartridge out of the firearm.

PIN PUNCH: Check fitment of pin punch to all pin diameters before applying pressure. Never forcefully hammer on this tool to remove a stuck or jammed pin. If necessary, the tap hammer may be used on the pin punch with light force to ease a snug pin in or out of its location.

STORAGE COMPARTMENT: A removable, magnetic, small parts storage box is located on the top of the Gun Tool Pro-AR15. This can be used to store extra pins, screws and springs for your firearm. The magnet can also aid in picking up small screws. To use the storage compartment it must first be removed from the tool by sliding it from the front of the tool towards the back of the tool. Once the box is removed it can be opened by disengaging the tab located on the underside of the storage compartment.

STEP 1: SLIDE COMPARTMENT OUT OF THE TOOL

STEP 2: DISENGAGE TAB FROM THE BOTTOM OF THE COMPARTMENT

THE STORAGE COMPARTMENT CAN BE REPLACED WITH AN AVAILABLE LED LIGHT MODULE. VISIT REALAVID.COM FOR DETAILS

BIT DRIVER / WRENCH: The Gun Tool Pro-AR15 is designed with two ways to use the supplied double-ended bits. The bit driver on the front of the tool can be used for precision work and the bit wrench on the side is designed for higher torque applications. Be careful not to exert excessive torque on the tool at any time.
